Dibya Rahman

ABOUT ME

Electrical & Electronic Engineering undergraduate at the Islamic University of Technology (IUT), maintaining a CGPA of 3.95/4.00. Experienced in engineering projects involving MATLAB/Simulink, EV systems, digital electronics, and robotics, with research-oriented exposure through a faculty-supervised literature review and an international physics competition. Interested in photonics and interdisciplinary engineering research, and eager to develop hands-on research experience.

RESEARCH INTERESTS

- Photonics & Optoelectronics
- Power Electronics
- EV & Energy Systems
- Applied Physics

KEY ACHIEVEMENTS

- **Silver Medal**

The University Physics Competition 2025

- **Champion**

- Soccerbot — Intra IUT EEE Day 2025

- **Champion ×2**

- RC Racing — Accelerate 2025 & Techathon 2025

- **Finalist**

- CaseMotion — AutoMech 2025

RESEARCH & EXPERIENCE

The University Physics Competition 2025

Silver Medal | Team 730

- Collaborated on International research-style physics competition involving open-ended problem solving, theoretical modeling, and scientific paper writing under a 48-hour deadline

EV / PHEV / HEV Literature Review

MCE 4391 | Faculty-Supervised | 2025

- Reviewed battery and energy storage systems, covering Li-ion technologies, BMS, thermal management, and emerging technologies; scored 14/15, the highest team mark.

Formula IUT — Electrical Sub-Team

Sub-Executive | Simulation Team | 2026 – Present

- Developed an EV longitudinal dynamics model in MATLAB/Simulink and contributed to electric kart motor-controller analysis.

EDUCATION

Islamic University of Technology(IUT)

B.Sc. in Electrical & Electronic Engineering
CGPA: 3.95 / 4.00 | September 2023 – 2028

SOS Hermann Gmeiner College Dhaka

sSC 2021 | GPA: 5.00/5.00

SOS Hermann Gmeiner College Dhaka

HSC 2023 | GPA: 5.00/5.00
General Grade Board Scholarship

SELECTED PROJECTS

SAP-1 8-bit Computer — Proteus

Digital Electronics Lab | 2026

- Designed and simulated an 8-bit SAP-1 computer architecture in a six-member team, extending the system with a 4-bit multiplier and BCD conversion.

Stock Market Crash Simulator — MATLAB

- Developed a MATLAB-based stochastic stock-market simulator using Markov Chains, Geometric Brownian Motion, and statistical crash detection.

Electrical Services Design — AutoCAD

- Designed the electrical services of a four-storied residential building, including load calculations, distribution, wiring, and protection.

Arduino Robotics — RC Racing & Soccerbot

- Contributed to chassis design, wiring, soldering, and troubleshooting; achieved multiple competition wins.
